

KILLER SNAILS' FIRST TOY FAIR

Excited to Share our Games at Booth #4500 at Toy Fair NYC 2018

Killer Snails creates award-winning learning games for children aged 8+. In these fast paced tabletop games, players journey to worlds beyond their imagination as they engage in real-world scientific problem solving.

OUR GAMES ARE:

Designed to feature current scientific discoveries

Developed with engaging gameplay to encourage healthy competition

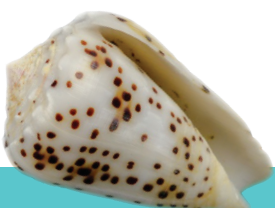

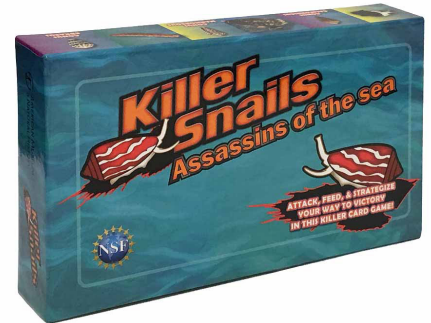

Tested with thousands of children, families, and teachers that have helped us build a solid foundation for great gameplay

PLAY LEADS TO LEARNING:

The educational value is embedded in the actions of the cards. "The decisions players make have natural repercussions, similar to actions taken in the field," said Game Designer Noelle Posadas. Chief Scientist Dr. Mandë Holford, research scientist with the American Museum of Natural History and Hunter College, said, "I'm most excited about including cutting edge research in language and context that players understand."

FUN FOR THE WHOLE FAMILY:

From the bright colors to the creatures in the games, our goal is to make games the entire family can enjoy. Dive into a Killer Snails game and discover new facts about the world!
